## WEB PAGE 02

# CarePlus – Doctor Appointment Website

HTML • CSS • Browser Output

**Website Description**

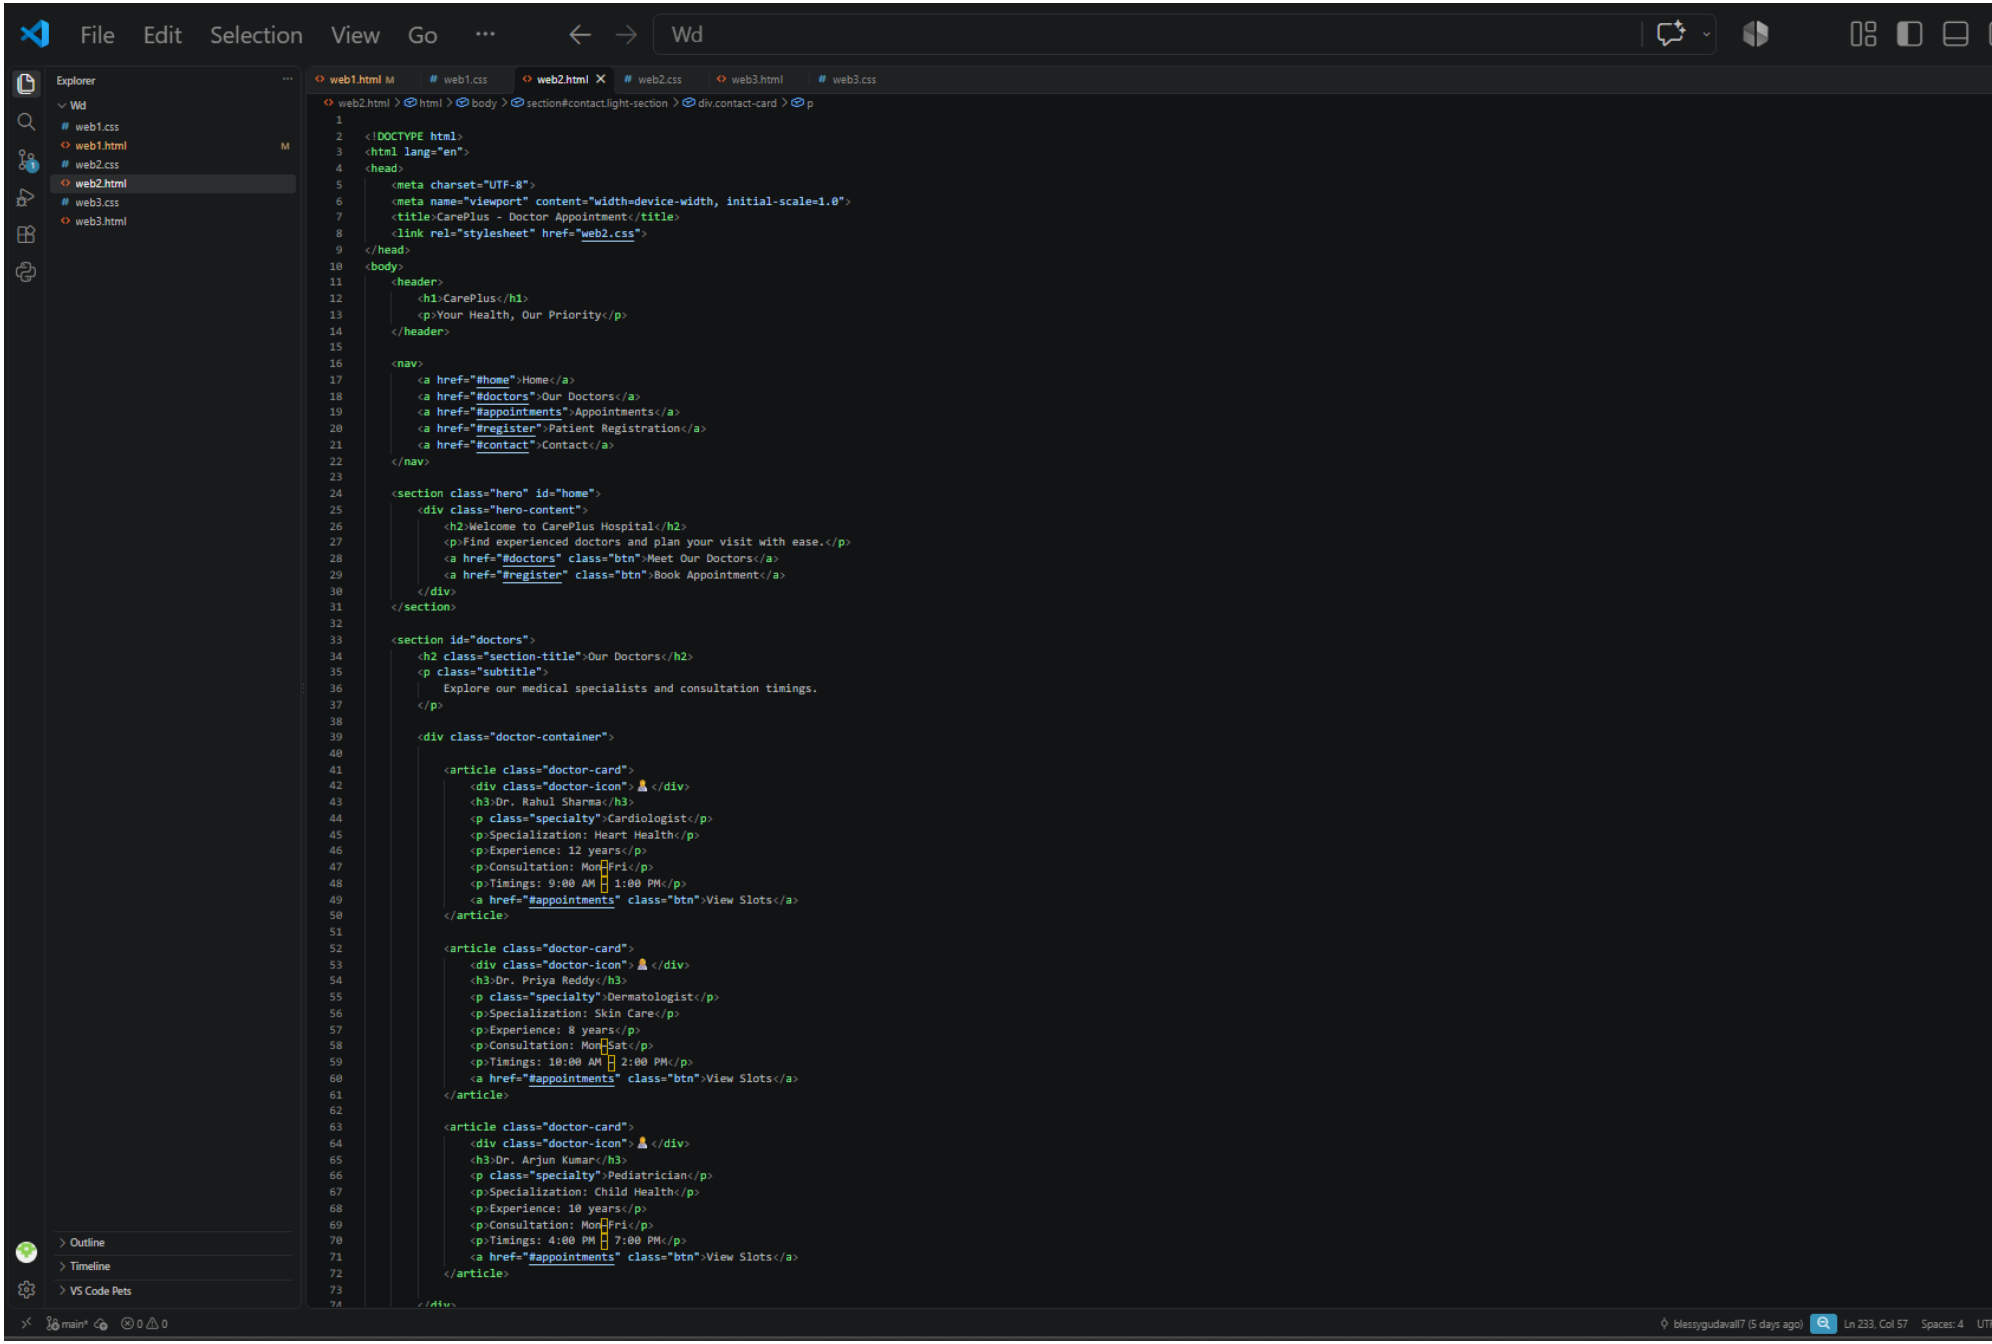

**CarePlus is a sample doctor appointment website designed to help visitors explore medical specialists and view consultation information in one place. The website includes a home section, navigation menu, doctor profiles, available appointment slots and a patient registration section. Each doctor profile presents a name, specialization, experience, consultation details and timings. The layout is designed to make the information easy to find and understand.**

*Project documentation report*

# 1. HTML CODE

The HTML file (web2.html) creates the structure and content of the CarePlus website. It organizes the page into sections and provides the text, navigation links, doctor details, appointment information and registration fields.

## HTML code screenshot

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">

            </article>

        </div>
```

*Figure 1. HTML source code for the CarePlus doctor appointment website.*

## What I have used in HTML

- **Basic structure:** <!DOCTYPE html>, <html>, <head> and <body> define the document and its content area.
- **Metadata and title:** meta tags set character encoding and responsive viewport settings; the <title> element names the browser tab.
- **External CSS file:** the <link> element connects web2.css to the HTML document.
- **Header and navigation:** <header> displays the CarePlus name and tagline, while <nav> contains links to Home, Our Doctors, Appointments, Patient Registration and Contact.
- **Hero section:** <section> and  elements create the welcome banner with introductory text and action links.
- **Doctor profiles:** <article> elements group each doctor's name, specialty, experience, consultation details and timings.
- **Text and links:** headings, paragraphs and <a> elements present information and link to relevant page sections.
- **Content grouping:** class and id attributes identify sections and groups so they can be styled and targeted by navigation links.

# 2. CSS CODE

The CSS file (web2.css) controls the visual appearance and layout of the CarePlus website. It defines colours, spacing, typography, card designs and interactive hover effects to make the information clear and consistent.

## CSS code screenshot

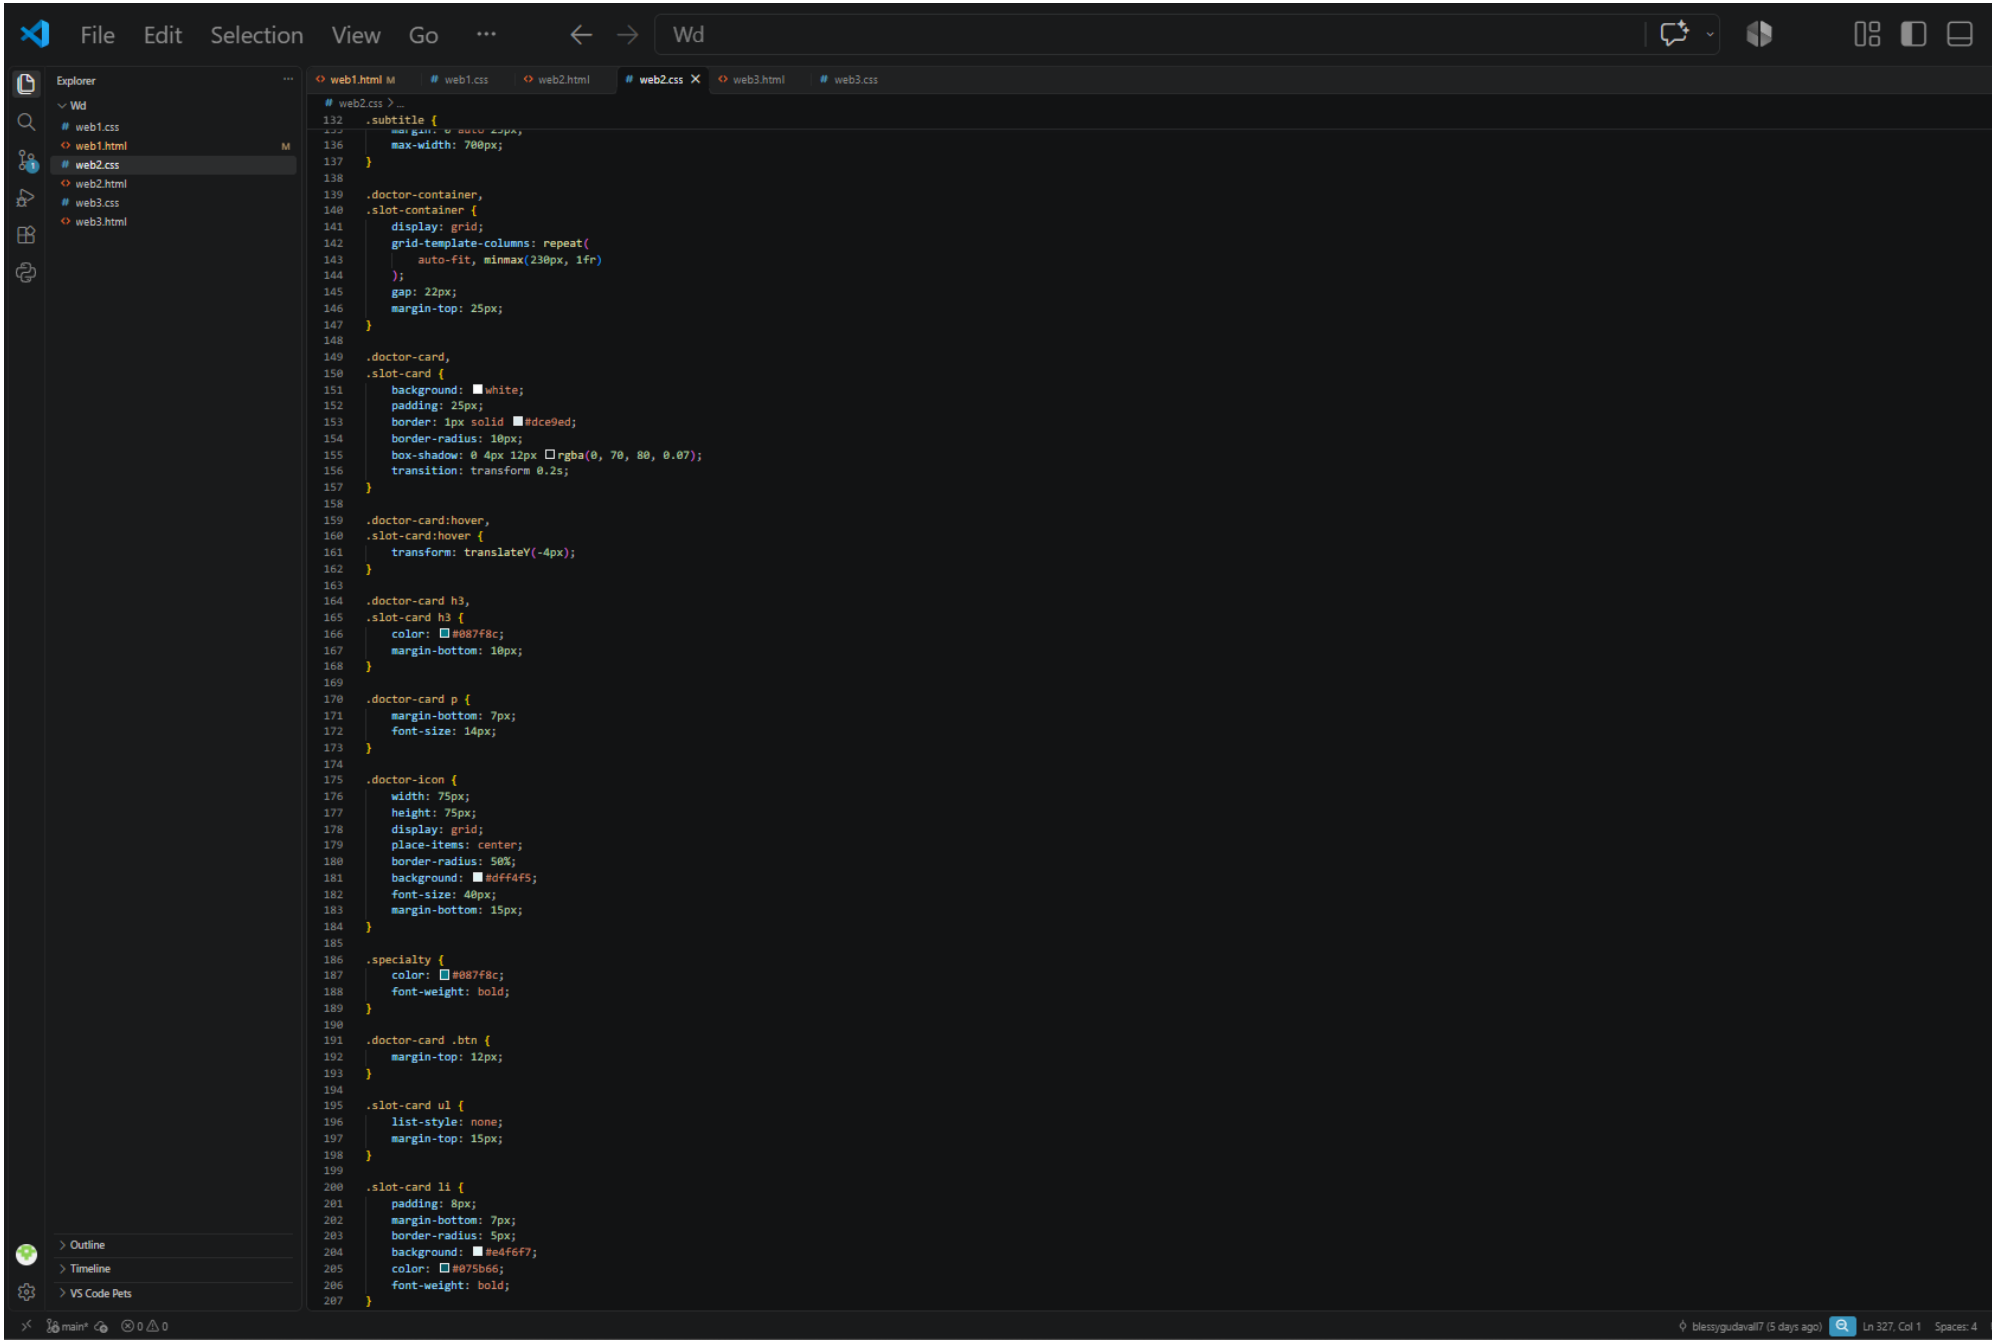

*Figure 2. CSS rules for the doctor cards and appointment-slot cards.*

## What I have used in CSS

- **Grid layout:** display: grid and grid-template-columns arrange doctor and appointment cards into responsive columns.
- **Spacing:** gap, margin and padding provide suitable distance between cards and their contents.
- **Card appearance:** background, border, border-radius and box-shadow create clean card-style sections.
- **Hover effects:** the :hover pseudo-class and transform: translateY(-4px) give cards a small movement effect when pointed at.
- **Typography and colours:** font-size, font-weight and color distinguish headings, specialties and other details.
- **Doctor icon:** width, height, display: grid and place-items center an icon inside a circular background.
- **Appointment slots:** list-style, padding, margin, border-radius and background styles display the available time slots clearly.
- **Reusable class selectors:** selectors such as .doctor-card, .slot-card, .doctor-icon and .specialty apply consistent styling to related elements.

# 3. OUTPUT

The screenshot below shows the CarePlus website running in a web browser. It is the final result of combining the HTML structure with the CSS design.

*Figure 3. Final browser output of the CarePlus doctor appointment website.*

## Description of the output

- The top header displays the CarePlus name and the tagline “Your Health, Our Priority”.
- The navigation bar provides links to Home, Our Doctors, Appointments, Patient Registration and Contact.
- The welcome banner introduces CarePlus Hospital and includes links to meet the doctors and book an appointment.
- The Our Doctors section displays three doctor profile cards with their names, specializations, experience, consultation days and timings.
- The Available Appointment Slots section displays sample time slots for each doctor. The page also notes that actual availability must be confirmed by the clinic.
- The Patient Registration section begins a form for visitors to enter their details, including a full name and email address.

## Conclusion

This project demonstrates how HTML structures a doctor appointment website and how CSS styles its layout and content. The final page organizes doctor profiles, sample appointment slots and patient registration details in a clear format. It provides a simple example of how a website can present healthcare appointment information to visitors.
