WEB PAGE 01

Dr. RVR NRIIT DTBU – College Website

HTML • CSS • Browser Output

Website description

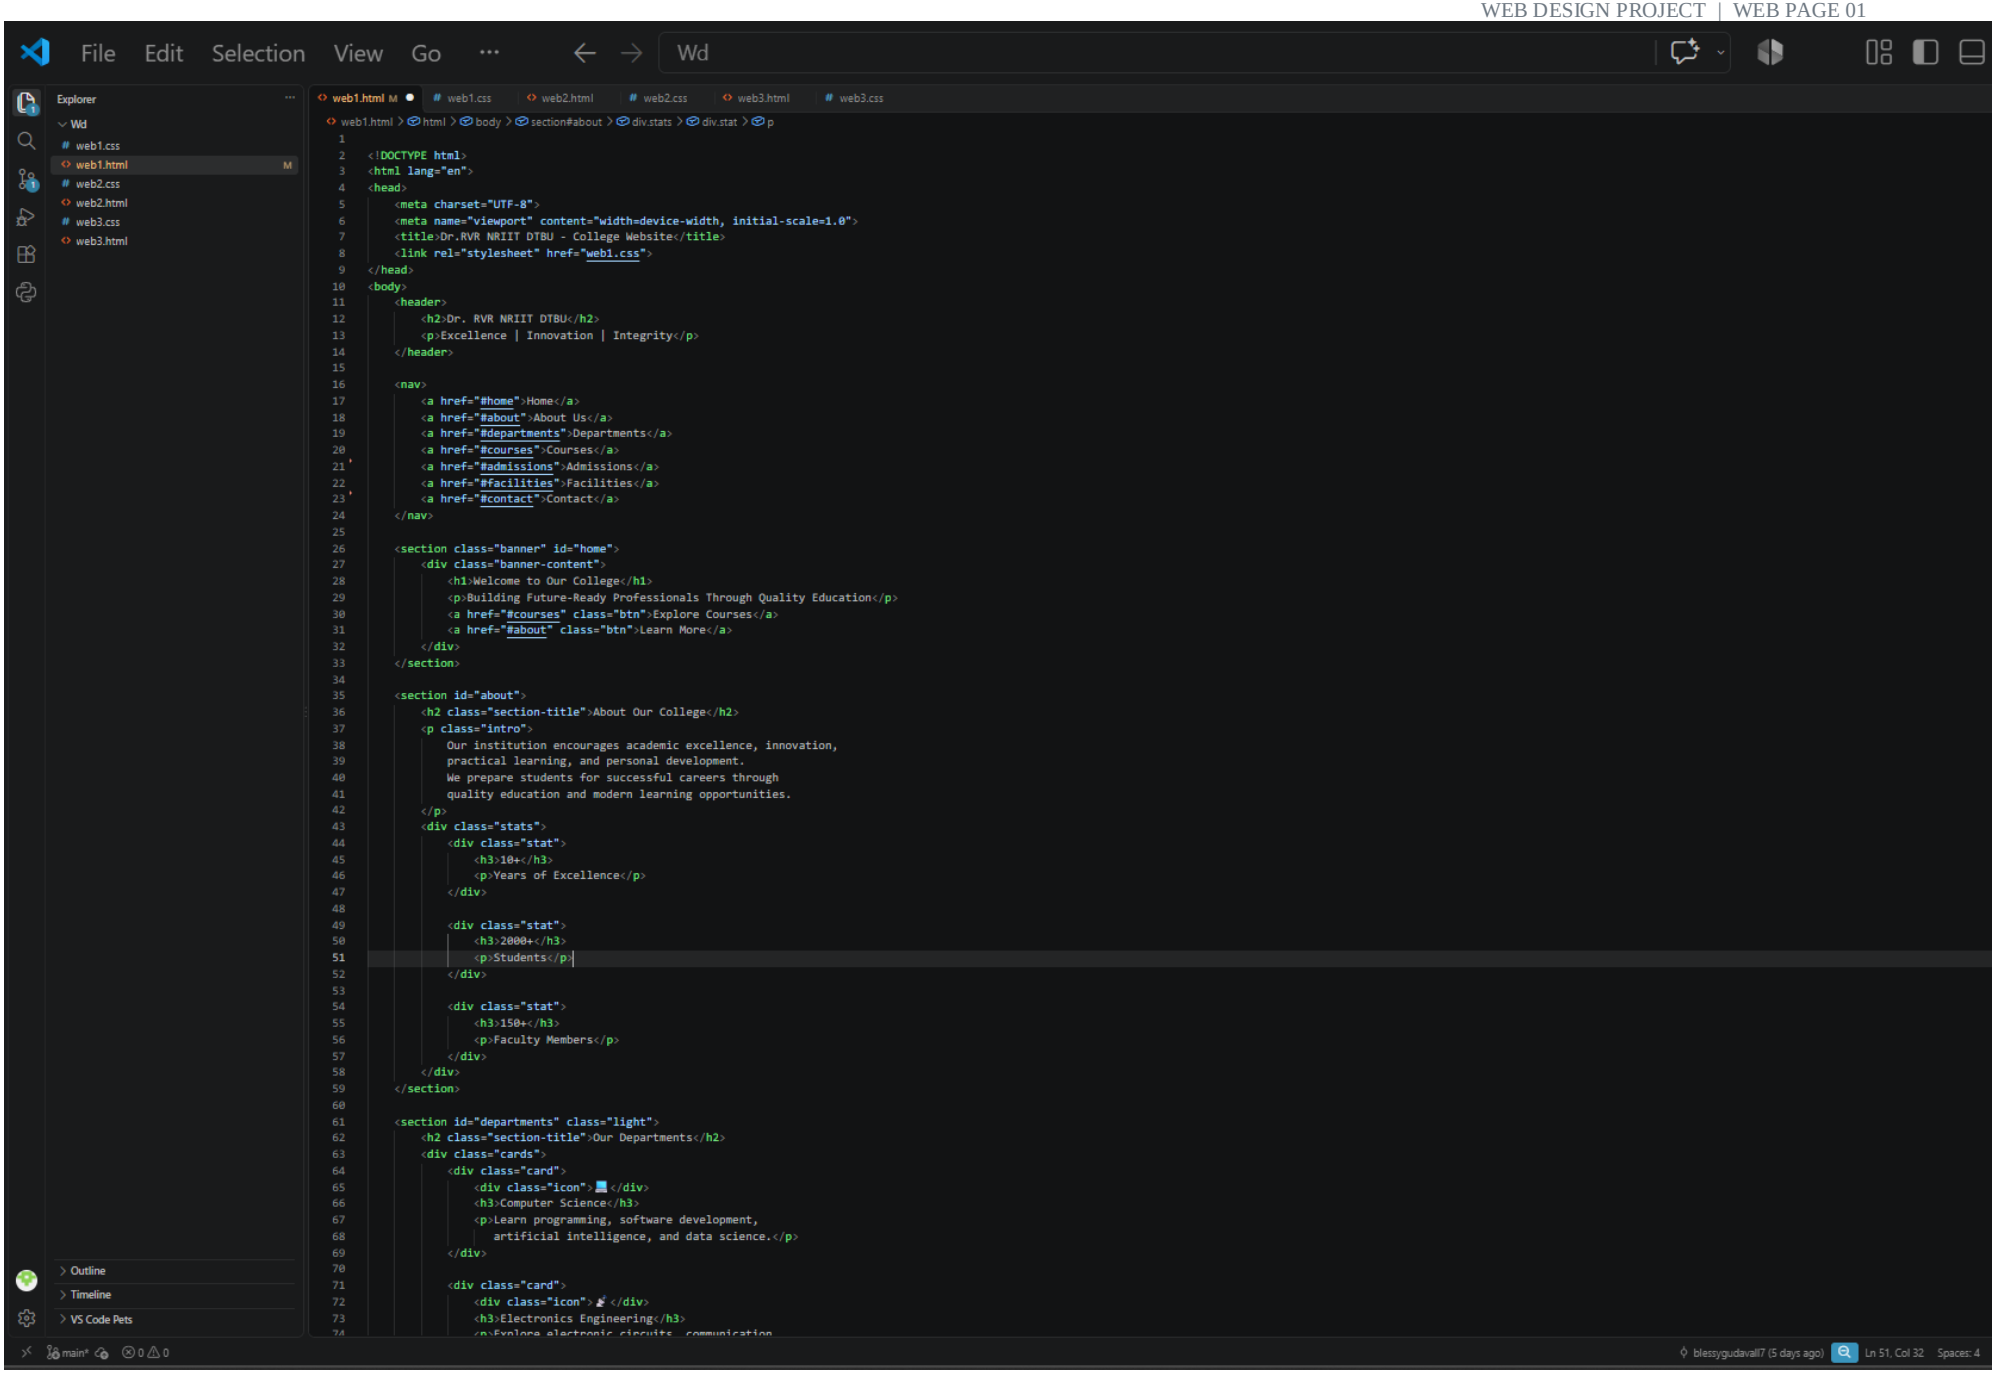

This project is a simple, informative college website for Dr. RVR NRIIT DTBU. It presents key institutional information in one place, including an introduction to the college, departments, courses offered and campus facilities. A navigation bar helps visitors move between sections, while the home banner introduces the institution and provides links to explore courses and learn more.

Prepared as a project documentation report

1. HTML CODE

The HTML file (web1.html) provides the structure and content of the college website. HTML elements are used to divide the page into meaningful sections and to display text, headings, links and content cards.

HTML code screenshot

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>Dr.RVR NRIIT DTBU - College Website</title>
    <link rel="stylesheet" href="web1.css">
</head>
<body>
    <header>
        <h2>Dr. RVR NRIIT DTBU</h2>
        <p>Excellence | Innovation | Integrity</p>
    </header>

    <nav>
        <a href="#home">Home</a>
        <a href="#about">About Us</a>
        <a href="#departments">Departments</a>
        <a href="#courses">Courses</a>
        <a href="#admissions">Admissions</a>
        <a href="#facilities">Facilities</a>
        <a href="#contact">Contact</a>
    </nav>

    <section class="banner" id="home">
        <div class="banner-content">
            <h1>Welcome to Our College</h1>
            <p>Building Future-Ready Professionals Through Quality Education</p>
            <a href="#courses" class="btn">Explore Courses</a>
            <a href="#about" class="btn">Learn More</a>
        </div>
    </section>

    <section id="about">
        <h2 class="section-title">About Our College</h2>
        <p class="intro">
            Our institution encourages academic excellence, innovation,
            practical learning, and personal development.
            We prepare students for successful careers through
            quality education and modern learning opportunities.
        </p>
        <div class="stats">
            <div class="stat">
                <h3>10+</h3>
                <p>Years of Excellence</p>
            </div>

            <div class="stat">
                <h3>150+</h3>
                <p>Faculty Members</p>
            </div>
        </div>
    </section>

    <section id="departments" class="light">
        <h2 class="section-title">Our Departments</h2>
        <div class="cards">
            <div class="card">
                <div class="icon">💻</div>
                <h3>Computer Science</h3>
                <p>Learn programming, software development,
                   artificial intelligence, and data science.</p>
            </div>

            <div class="card">
                <div class="icon">📡</div>
                <h3>Electronics Engineering</h3>
                <p>Explore electronic circuits, communication
```

Figure 1. HTML source code in Visual Studio Code.

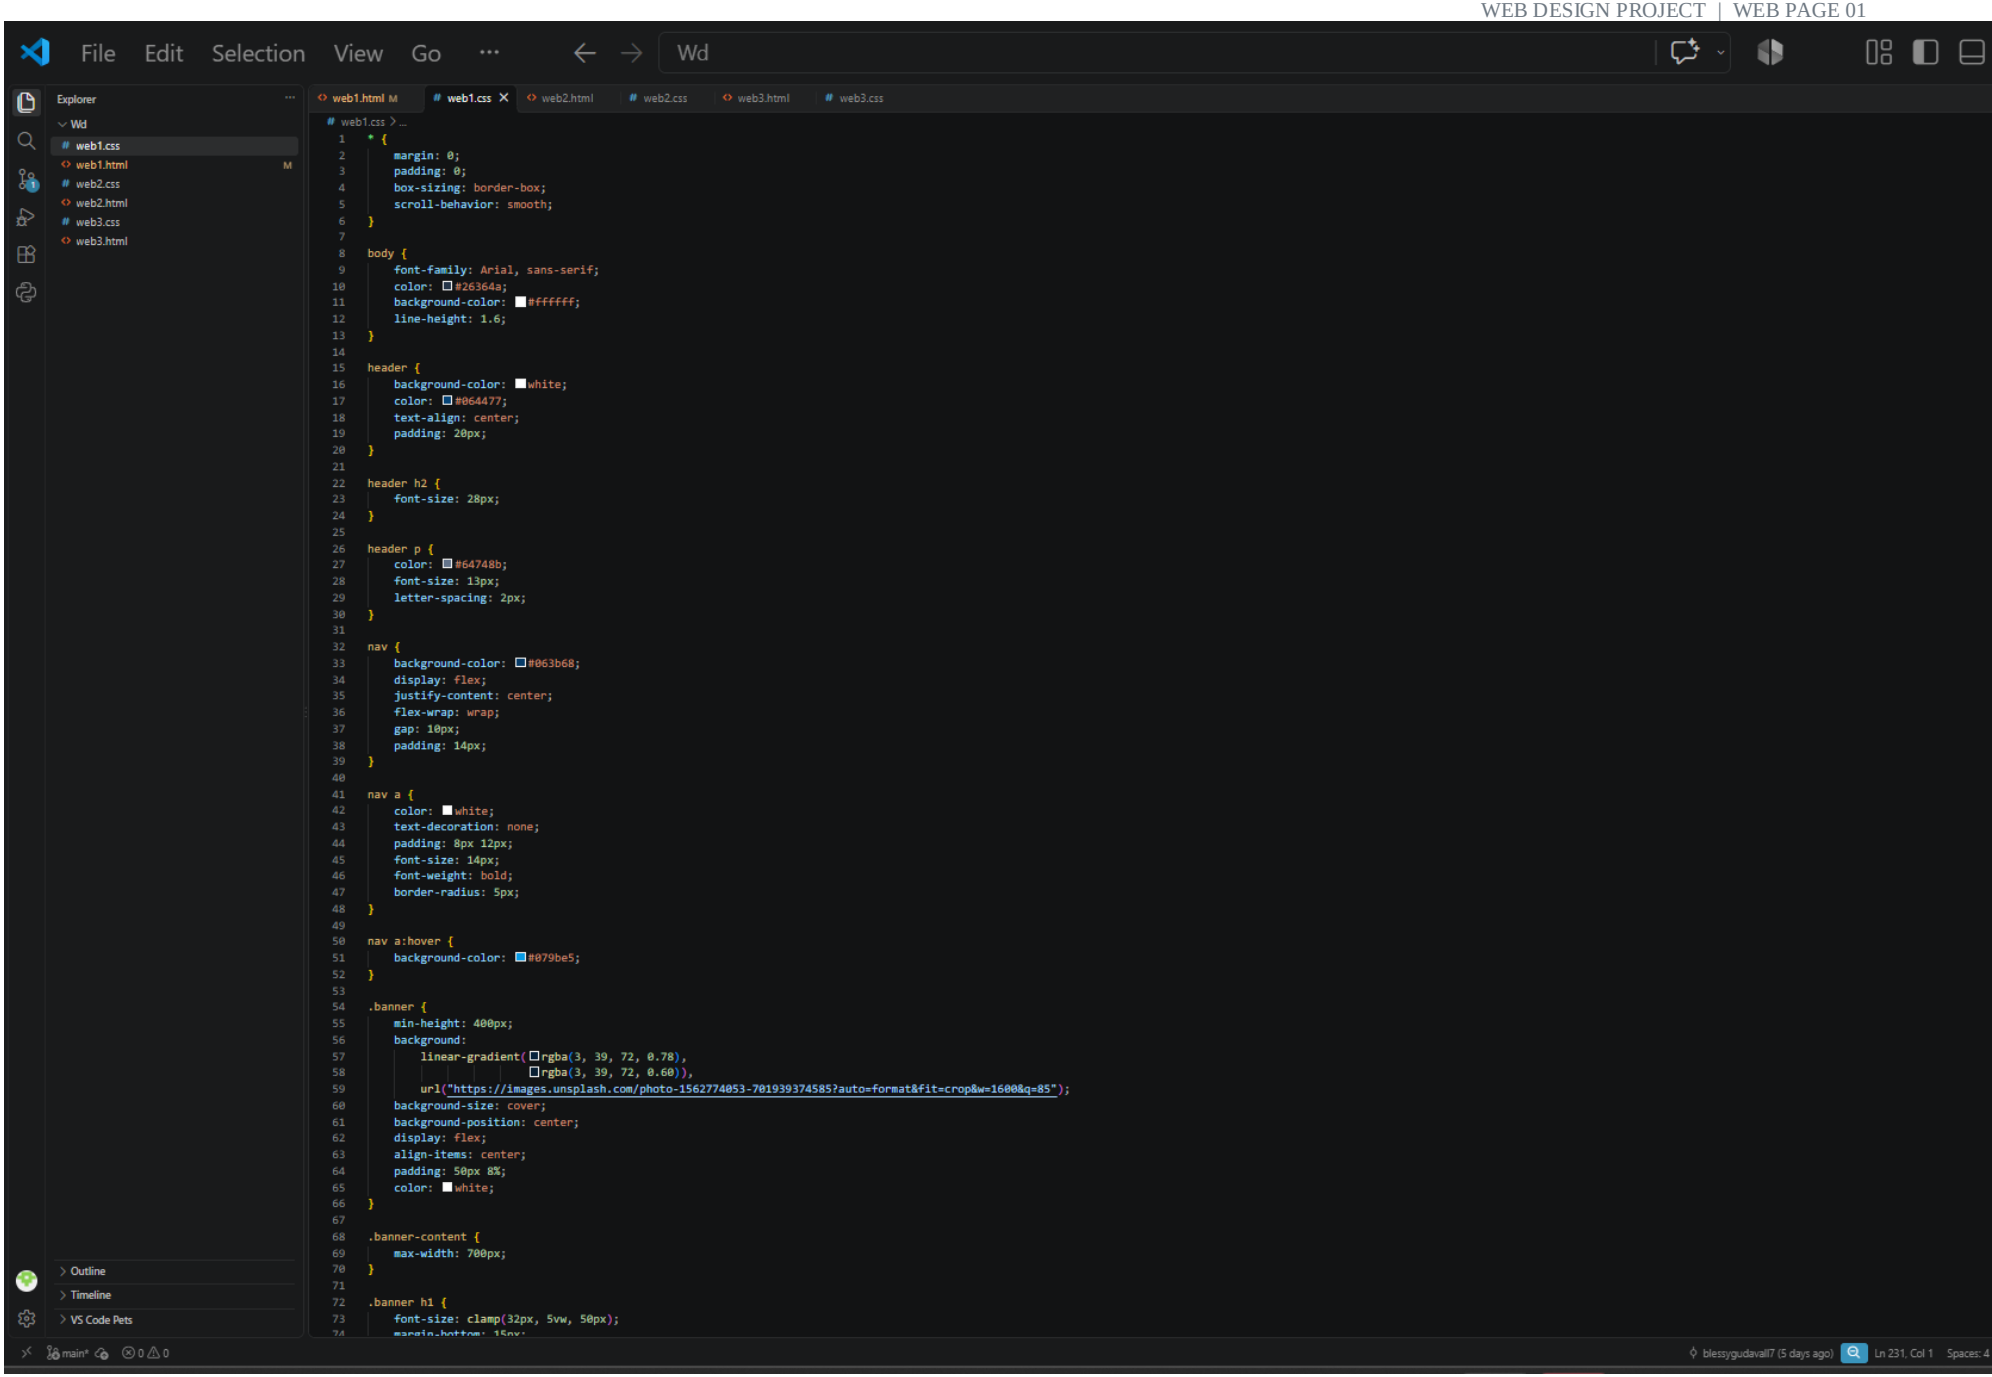

What I have used in HTML

- **Basic document structure:** <!DOCTYPE html>, <html>, <head> and <body> create the standard HTML page.
- **Page information:** meta tags define character encoding and viewport settings; the title sets the browser-tab name.
- **External stylesheet:** the <link> element connects web1.css to the HTML page.
- **Header and navigation:** <header> displays the college name and tagline; <nav> contains links to the main sections.
- **Main sections:** <section> elements organize the home banner, About Our College and Our Departments content.
- **Text and links:** headings, paragraphs and anchor (<a>) elements present information and provide navigation.
- **Content grouping:** elements group related items such as banner content, statistics and department cards.

2. CSS CODE

The CSS file (web1.css) controls the appearance and layout of the website. It styles the HTML elements so that the page looks organized, readable and consistent.

CSS code screenshot

```css
* {
    margin: 0;
    padding: 0;
    box-sizing: border-box;
    scroll-behavior: smooth;
}

body {
    font-family: Arial, sans-serif;
    color: #26364a;
    background-color: #ffffff;
    line-height: 1.6;
}

header {
    background-color: white;
    color: #064477;
    text-align: center;
    padding: 20px;
}

header h2 {
    font-size: 28px;
}

header p {
    color: #64748b;
    font-size: 13px;
    letter-spacing: 2px;
}

nav {
    background-color: #063b68;
    display: flex;
    justify-content: center;
    flex-wrap: wrap;
    gap: 10px;
    padding: 14px;
}

nav a {
    color: white;
    text-decoration: none;
    padding: 8px 12px;
    font-size: 14px;
    font-weight: bold;
    border-radius: 5px;
}

nav a:hover {
    background-color: #079be5;
}

.banner {
    min-height: 400px;
    background:
        linear-gradient(rgba(3, 39, 72, 0.78),
                        rgba(3, 39, 72, 0.60)),
        url("https://images.unsplash.com/photo-1562774053-701939374585?auto=format&fit=crop&w=1600&q=85");
    background-size: cover;
    background-position: center;
    display: flex;
    align-items: center;
    padding: 50px 8%;
    color: white;
}

.banner-content {
    max-width: 700px;
}

.banner h1 {
    font-size: clamp(32px, 5vw, 50px);
```

Figure 2. CSS styling code in Visual Studio Code.

What I have used in CSS

- **Universal selector (*):** resets the default margin and padding and applies border-box sizing.
- **Body styling:** sets Arial as the font, defines the text and background colours, and improves line spacing.
- **Header styling:** uses a light background, dark-blue text, centered alignment and padding.
- **Navigation styling:** uses Flexbox to arrange menu links, with spacing, wrapping, link formatting and a hover colour.
- **Banner styling:** uses a minimum height, a linear-gradient overlay and a background image; background-size and background-position control its display.
- **Layout and spacing:** Flexbox, padding, gaps and maximum widths help arrange and space page content.
- **Visual presentation:** colours, font sizes, borders, rounded corners and other style rules make the content easier to read.

3. OUTPUT

The following screenshot shows the completed college website opened in a web browser. It demonstrates how the HTML structure and CSS styling work together to produce the final page.

Figure 3. Final output of the Dr. RVR NRIIT DTBU college website.

Description of the output

- The top header displays the college name and the tagline “Excellence | Innovation | Integrity”.
- The navigation bar provides links to Home, About Us, Departments, Courses, Admissions, Facilities and Contact.
- The home banner displays a college-building background image, a welcome message and two action links: Explore Courses and Learn More.
- The About Our College section gives a short introduction and displays three statistics: 10+ years of excellence, 2000+ students and 150+ faculty members.
- The Departments section presents department cards such as Computer Science, Electronics Engineering, Electrical Engineering, Mechanical Engineering and Civil Engineering.
- The Courses Offered section displays course cards, including B.Tech CSE, B.Tech CSE (AI & ML), B.Tech ECE and MBA.
- The Campus Facilities section begins to display facilities such as Library, Laboratories, Hostel, Sports, Cafeteria and Transportation.

Conclusion

This project demonstrates how HTML is used to structure a college website and how CSS is used to style and arrange its content. The final output provides a clear layout, simple navigation and organized information for visitors.
