WEB PAGE 03

TravelGo – Travel Booking Website

HTML • CSS • Browser Output

Website Description

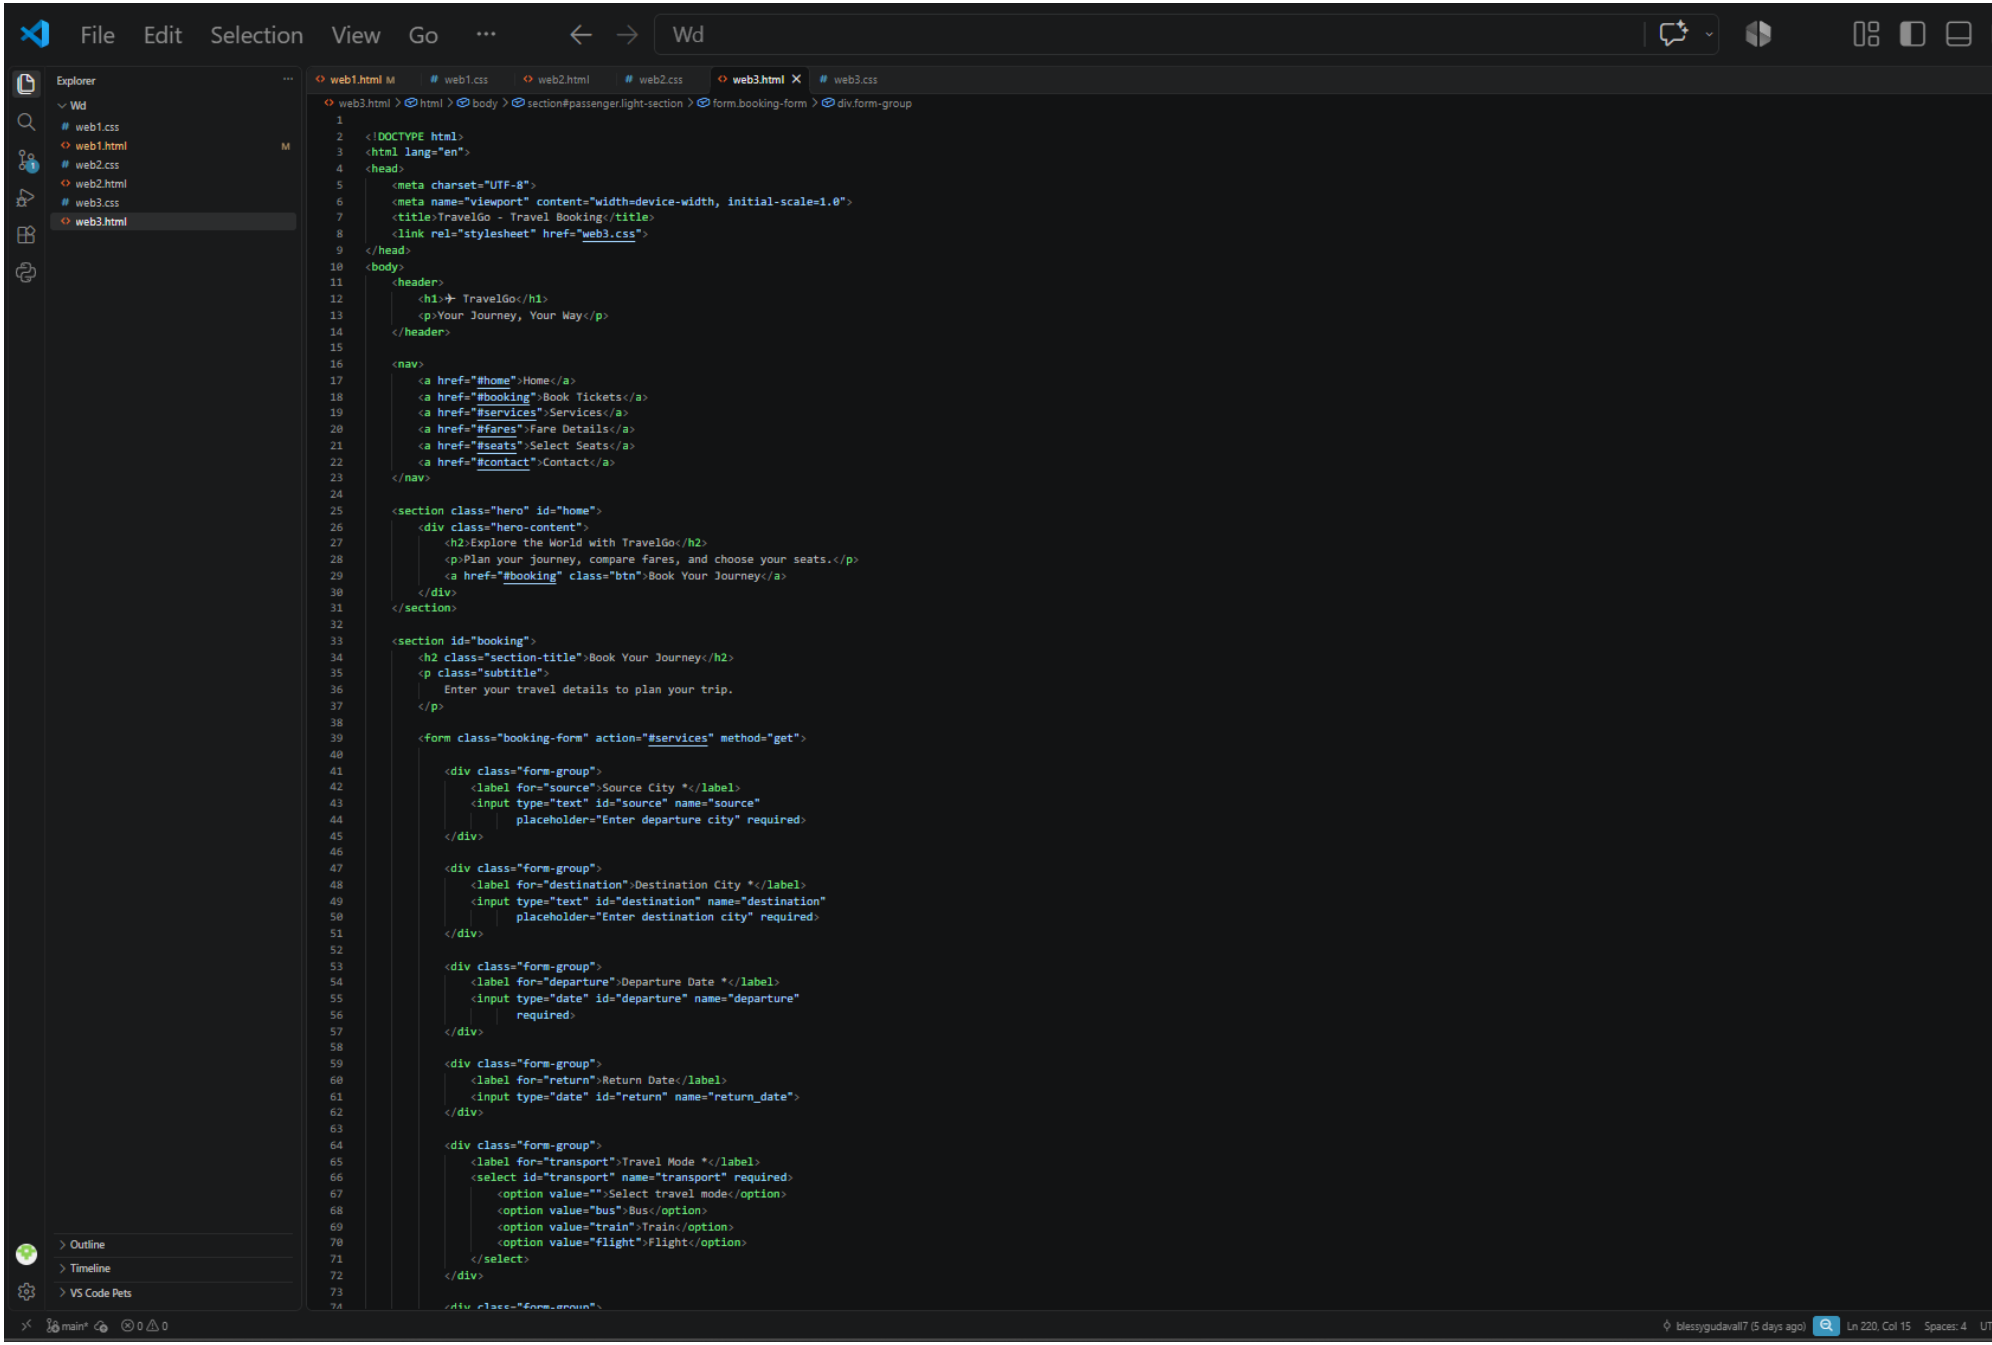

TravelGo is a sample travel booking website created to help visitors plan a journey and compare travel options. It provides a booking form where users can enter their source city, destination city, departure date, return date, travel mode and number of passengers. The website also presents available travel services, fare details and seat-selection information. Its navigation menu helps visitors move between the main sections, while the page layout keeps booking information organized.

Project documentation report

1. HTML CODE

The HTML file (web3.html) defines the structure and content of the TravelGo website. It organizes the page into sections and provides the booking form, navigation links, travel-service information and fare details.

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>TravelGo - Travel Booking</title>
    <link rel="stylesheet" href="web3.css">
</head>
<body>
    <header>
        <h1>✈ TravelGo</h1>
        <p>Your Journey, Your Way</p>
    </header>

    <nav>
        <a href="#home">Home</a>
        <a href="#booking">Book Tickets</a>
        <a href="#services">Services</a>
        <a href="#fares">Fare Details</a>
        <a href="#seats">Select Seats</a>
        <a href="#contact">Contact</a>
    </nav>

    <section class="hero" id="home">
        <div class="hero-content">
            <h2>Explore the World with TravelGo</h2>
            <p>Plan your journey, compare fares, and choose your seats.</p>
            <a href="#booking" class="btn">Book Your Journey</a>
        </div>
    </section>

    <section id="booking">
        <h2 class="section-title">Book Your Journey</h2>
        <p class="subtitle">
            Enter your travel details to plan your trip.
        </p>

        <form class="booking-form" action="#services" method="get">

            <div class="form-group">
                <label for="source">Source City *</label>
                <input type="text" id="source" name="source"
                       placeholder="Enter departure city" required>
            </div>

            <div class="form-group">
                <label for="destination">Destination City *</label>
                <input type="text" id="destination" name="destination"
                       placeholder="Enter destination city" required>
            </div>

            <div class="form-group">
                <label for="departure">Departure Date *</label>
                <input type="date" id="departure" name="departure"
                       required>
            </div>

            <div class="form-group">
                <label for="return">Return Date</label>
                <input type="date" id="return" name="return_date">
            </div>

            <div class="form-group">
                <label for="transport">Travel Mode *</label>
                <select id="transport" name="transport" required>
                    <option value="">Select travel mode</option>
                    <option value="bus">Bus</option>
                    <option value="train">Train</option>
                    <option value="flight">Flight</option>
                </select>
            </div>
```

Figure 1. HTML source code for the TravelGo travel booking website.

What I have used in HTML

- **Basic document structure:** <!DOCTYPE html>, <html>, <head> and <body> define the web document and its content.
- **Metadata and page title:** meta tags set character encoding and viewport settings; the <title> element displays “TravelGo - Travel Booking” as the browser-tab title.
- **External stylesheet:** the <link> element connects web3.css to the HTML page.
- **Header and navigation:** <header> displays the TravelGo name and tagline; <nav> contains links to Home, Book Tickets, Services, Fare Details, Select Seats and Contact.
- **Hero section:** <section> and elements create the welcome banner with a heading, short description and booking link.
- **Booking form:** <form> groups the travel fields; <label> provides field names, <input> collects city and date details, and <select> offers travel-mode choices.
- **Form attributes:** type, id, name, placeholder and required define input behaviour and connect labels to their fields.
- **Content organization:** headings, paragraphs, sections and div elements separate booking information and other website content.

2. CSS CODE

The CSS file (web3.css) controls the design and visual presentation of the TravelGo website. It styles the header, navigation menu, hero banner, forms and other page elements to create a consistent and easy-to-read layout.

CSS code screenshot

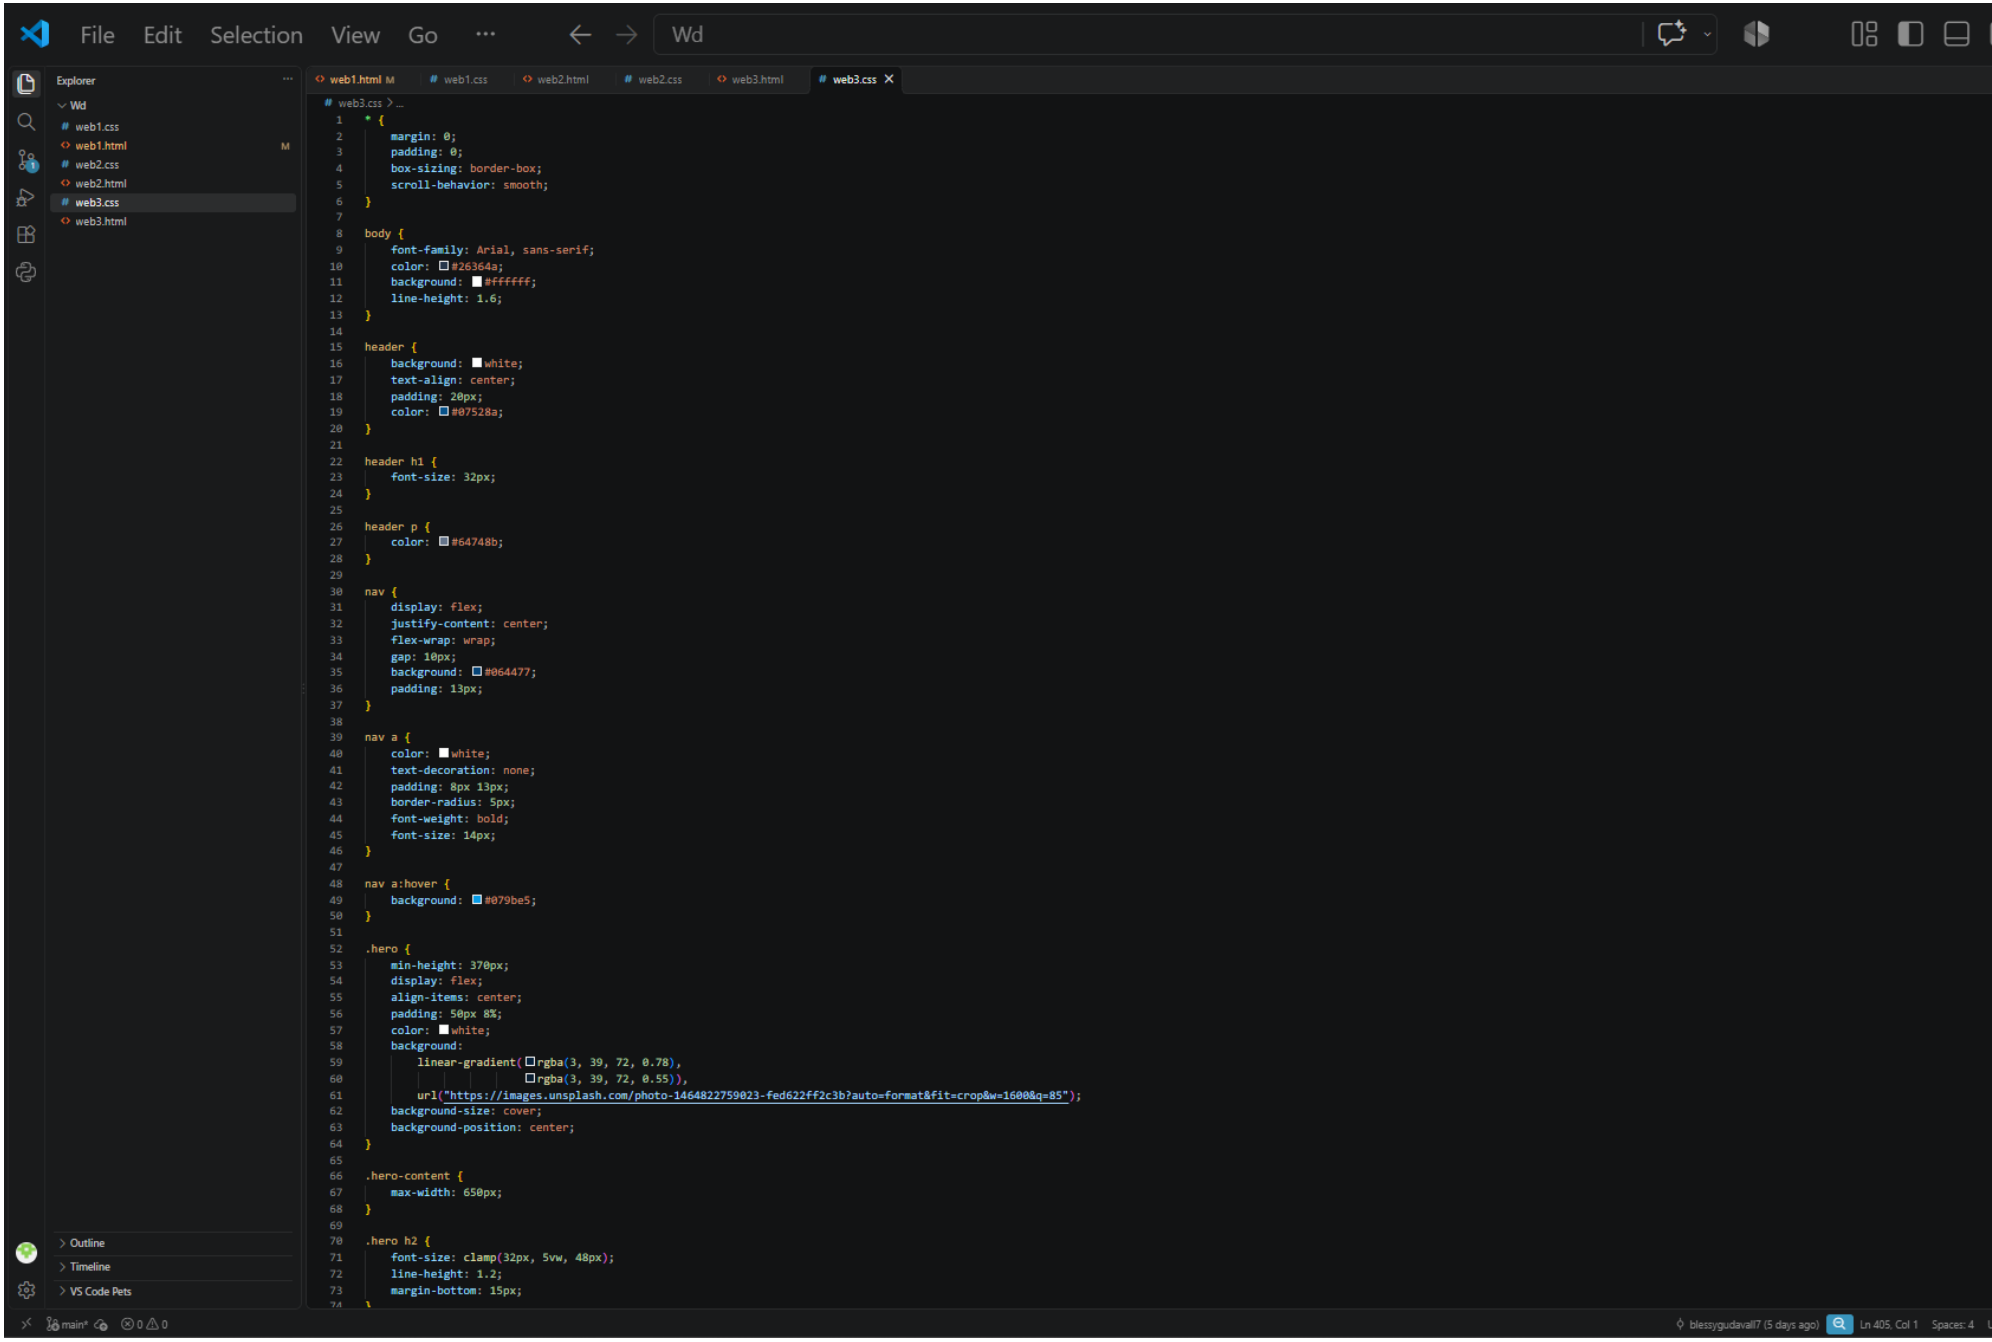

Figure 2. CSS styling rules for the TravelGo website.

What I have used in CSS

- **Universal selector (*):** resets default margins and padding and applies border-box sizing; smooth scrolling improves movement between page sections.
- **Body styling:** sets Arial as the font, defines text and background colours, and controls line spacing.
- **Header styling:** uses a white background, centered text, padding and a blue heading colour.
- **Navigation with Flexbox:** display: flex, justify-content, flex-wrap and gap arrange menu links and provide spacing.
- **Navigation link and hover styling:** colour, padding, font weight and border radius style the links; :hover changes the background colour.
- **Hero banner:** uses a minimum height, Flexbox alignment, padding, white text, a linear-gradient overlay and a background image.
- **Background properties:** background-size: cover and background-position: center help the image fill and align within the banner.
- **Reusable selectors:** class selectors such as .hero and .hero-content apply consistent styling to related HTML elements.

3. OUTPUT

The following screenshot shows the TravelGo website running in a web browser. It demonstrates the final appearance produced by combining the HTML structure with the CSS styling.

Website output screenshot

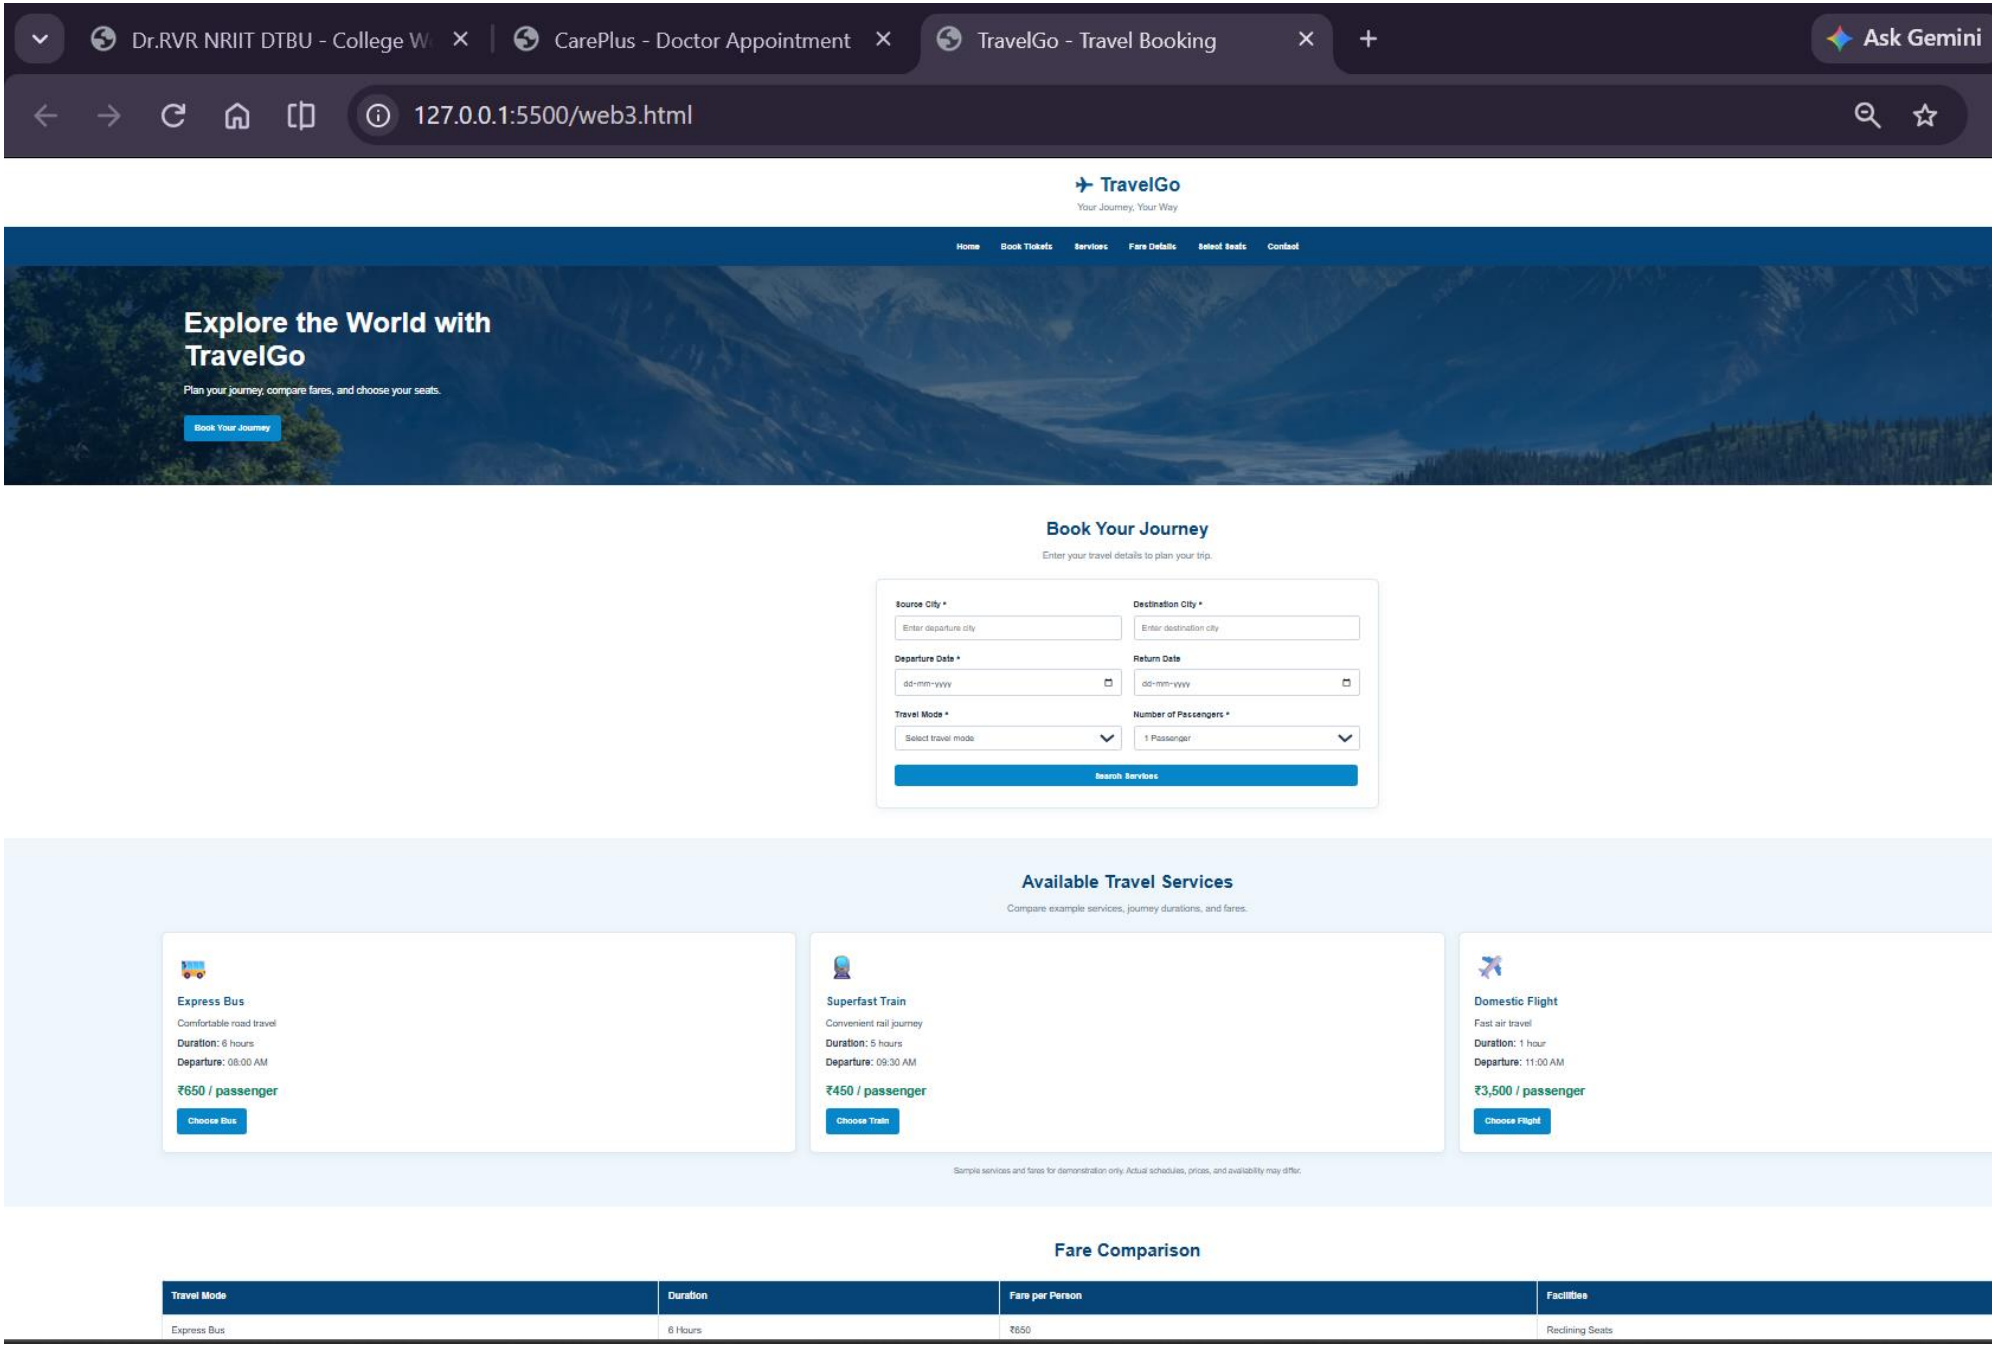

Figure 3. Final browser output of the TravelGo travel booking website.

Description of the output

- The top header displays the TravelGo name, a travel-themed icon and the tagline “Your Journey, Your Way”.
- The navigation bar provides links to Home, Book Tickets, Services, Fare Details, Select Seats and Contact.
- The hero banner displays a mountain landscape background, the message “Explore the World with TravelGo”, a short introduction and a Book Your Journey link.
- The Book Your Journey section contains fields for source city, destination city, departure date, return date, travel mode and number of passengers, followed by a search-services button.
- The Available Travel Services section displays sample options such as Express Bus, Superfast Train and Domestic Flight, with journey duration, departure time, fare per passenger and selection buttons.
- The Fare Comparison section begins a table that compares travel modes using details such as duration, fare per person and facilities.
- The page uses a clean blue-and-white colour scheme, clear section headings and card layouts to organize the travel information.

Conclusion

This project demonstrates how HTML can be used to create the structure of a travel booking website and how CSS can improve its appearance and layout. The final output presents journey details, travel services and fare comparisons in an organized format. It is a sample front-end design intended to demonstrate website development concepts.
